Why do I keep getting kidney stones?

If you have had a kidney stone that has gone untreated, or have a history of producing stones, DMC specialists can give you answers.

Introducing the DMC Kidney Stone Center

- Prevention/risk assessment
- Medical Care
- Surgical intervention
- Clinical research
- Comprehensive evaluations by a team of dietician, nephrology, and bone metabolism specialists

Individualized Care Plans

Our entire team works together to help identify and treat the specific causes of kidney stones and prevent stone recurrence. As a DMC Kidney Stone Center patient, once a complete evaluation has been performed you will receive a comprehensive management plan to minimize stone recurrence and/or growth.

For an assessment appointment call 313-274-4793 or ask your physician for a referral.

Jason B. Wynberg, M.D., FACS

Urologist, Harper University Hospital

Center Director Dr. Jason B. Wynberg is a board-certified urologist with extensive experience in the medical and surgical treatment of kidney stones. He is highly skilled in all urologic procedures, including robotic surgery, laser surgery, and advanced kidney stone surgery. He has several patents and patents pending in the areas of surgical device development, CT scan technology, social media and cell-based cancer therapy.

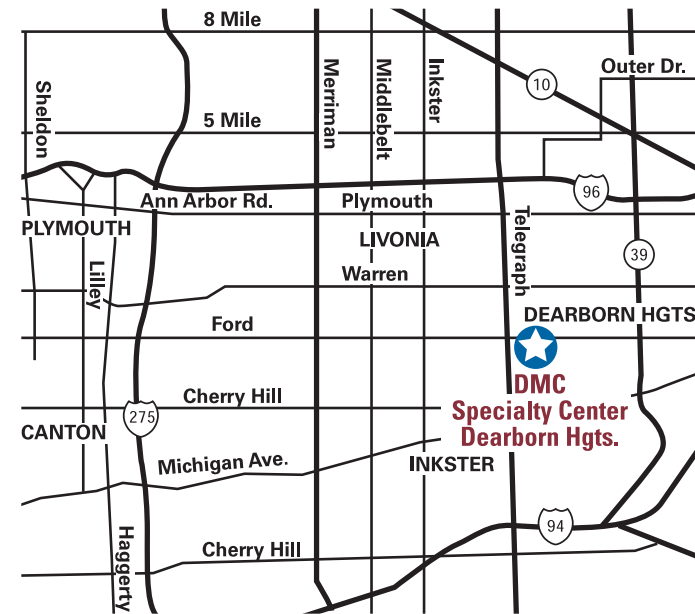

Cutting-Edge Kidney Stone Research

Several clinical and non-clinical research studies are currently underway in the DMC Kidney Stone Center.

Low-dose Radiation CT Scans — Researchers at Harper University Hospital and Wayne State University are studying the effectiveness of low-dose radiation CT scans in the evaluation of kidney stone patients. It is hoped that in a short time we will be able to offer dramatically reduced radiation dosages for kidney stone CT scans.

New PCNL Technique — Using a surgical device he modified and patented, Dr. Jason Wynberg is studying a new technique for Percutaneous Nephrolithotomy (PCNL). It is believed that this new technique will reduce radiation exposure to his patients, improve stone-free rates and reduced time in hospital.

DMC Kidney Stone Center
is located inside the **DMC Specialty Center Dearborn Heights**

25325 Ford Road
Dearborn Heights, MI 48127
